

Cost-Effective Elastomeric Roof Coating System

APPLICATIONS

ELASTOMERIC COATING

MANUFACTURER

EVEREST ROOF SYSTEMS

PRODUCTS

EVERMETAL

SIZE

200 SQUARES

PROBLEM

The new owner purchased the building with pre-existing hail damage to the R-panel metal roof. The damage was too old to submit a claim with insurance & the building was not in our customer's ownership at the time of loss. Our customer needed a cost effective method to stop leaks and extend the roof system's life

SOLUTION

Apply a 10-year elastomeric roof coating system from Everest. Our scope was to de-scale the R-panel roof and damaged panels, trim, and gutters. Seal all bolts, horizontal & vertical seams, penetrations, and curbs. The existing skylights were to receive an evident coat seal. After the roof system was prepped, we would proceed with an application of a two-coat elastomeric roof coating system.

RESULTS

Aesthetically the roof looks great, but functionally it's performing even better. The leaks have been eliminated, and the warehouse space is cooler than it was with the old R-panel system alone. The building owner is satisfied with the finished product and will likely apply a similar system to the front portion of the building in the near future.
